

# **HOME HOSPITAL**

With advances in medicine and the use of IT in medicine, it is possible to drive your expert medical care in every nook and corner of our country. New Vrundavan wants to lead in this frontier of health care. Trying to take almost most of the health facilities at your home. New Vrundavan Hospital will create a futuristic healthcare model – The Home Hospital

All of us fall sick. All of us die. Dying is basically leaving our body vehicle and perhaps going in to another vehicle. I feel this is the best thing that is happening to us. We are embarking on another journey, beyond this earth and that too free of cost.

The person who is going for a journey is definitely happy . Why not the family gives him a happy send-off. This can happen if the whole family, his near and dear ones are physically close with him during death. This is not possible in today's hospital and ICU setups. Obviously if we manage to treat the patient at home, this idea can be implemented in few cases as on now. Who knows in times to come the concept of home hospital can become a real one and may take it over especially in a country like India where everyone in the family does not work. The cost of hospital treatment can be brought down significantly.

## **Challenges**

1. Not feasible in all cases.
2. The people at the home have to have the some idea of care of a person when he is sick.
3. Each patient needs a lot of medical personnel and expertise
4. Highly sophisticated medical experts cannot spend time in traveling.
5. A sophisticated ICU or OT may be difficult at home

Obviously it cannot happen in all the cases as on now.

But it is possible or even better in some cases as on now specially noncritical medical cases and terminally ill patient where the family love each other, respect each other and may be happy to send off their near and dear ones when they leave this world.

With the similar intention and to reduce the cost New Vrundavan has come with the purpose of Vrundavan Home Hospital, where we can bring about a change both in quality as well as care of the patient.

A large number of senior people find it very difficult to go to the hospital even to seek basic medical care. This definitely is a boon to all such people. New Vrundavan can send a nurse or aya to the home of these people to render the necessary medical service. Machines like ECG, Ultrasound, Audiometry, spirometry and many more can be sent home. Doctor visit is a routine thing that happens today besides the medical equipment's like hospital bed, O2 cylinders, suction machine, monitor etc. can be made available and may be monitored from the central station that is hospital where 24 x 7 facilities are available.

All in all New Vrundavan works with a purpose to make the life of people it serves more comfortable. Simultaneously New Vrundavan also sees to it that the overall expense a person spends, will be very affordable to him. New Vrundavan is committed to create such home care a routine and affordable procedure.
